Configuring a Secondary User Store Manually

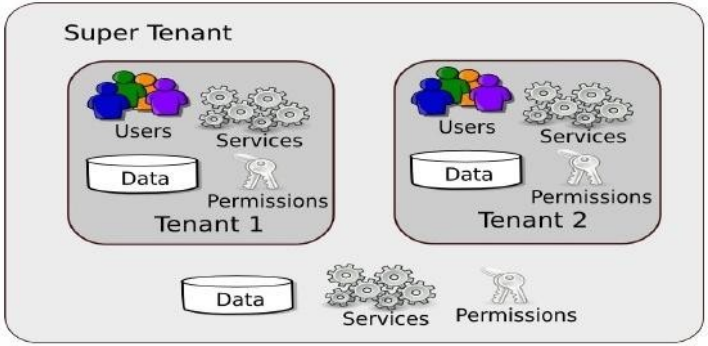

- When you configure multiple user stores, you must **give a unique domain name to each user store** in the <DomainName> element.
- If it is the configuration of a super tenant, save the secondary user store definitions in <APIM_HOME>/repository/deployment/server/userstores directory.
- If it is a general tenant, save the configuration in <APIM_HOME>/repository/tenants/<tenantid>/userstores directory
- The secondary user store configuration file must have the same name as the domain with an underscore (_) in place of the period. For example, if the domain is wso2.com, name the file as wso2_com.xml
- Only one file should contain the definition for one user store domain.

Configuring a Secondary User Store Manually

Introduction to Multi Tenancy

- Maximize resource sharing by allowing multiple users (tenants) to log in and use a single server/cluster at the same time, in a tenant-isolated manner.
- Ensures optimal performance of the system's resources such as memory and hardware
- Secures each tenant's personal data.
- Register tenant domains using the Management Console.
- Features of multi tenanted environment
    - Tenant isolation
    - Data isolation
    - Execution isolation
    - Performance Isolation

Link : Introduction to Multi Tenancy

Multi Tenancy

- An Individual Tenant can perform the following:
    - Deploying artifacts
    - Applying Security
    - User Management
    - Data Management
    - Request Rate Limiting
    - Response Caching

- Methods for sharing resources among tenants
    - Separation at hardware level
    - Separation at JVM level
    - Native multi tenancy

Updating WSO2 API Manager Using WSO2 Updates 2.0

- **WSO2 Updates 2.0** : WSO2 Updates include improvements that are released by WSO2, on top of a released WSO2 product version. With updates, you do not have to wait until the next product version release to get the product enhancements and security fixes.
- Refer https://updates.docs.wso2.com/en/latest/updates/overview/ for more details on how to update WSO2 APIM 4.7.0 using Updates 2.0.

Let’s try it out!
