WSO2

# Overview

- WSO2 API Manager exposes a set of RESTful product APIs that allow you to create, manage, and consume APIs programmatically — without using the UI.
- All APIs can be consumed directly via an external REST client such as cURL, Postman, or any HTTP client.
- Secured using OAuth2. A valid access token with the appropriate scope must be included as a Bearer token in the Authorization header.

RESTful APIs

# Publisher APIs

WSO2

# Publisher APIs

- Used by API Publishers to create, manage, and publish APIs via REST

- Base URL: https://<host>:9443/api/am/publisher/v4

# Developer Portal APIs

WSO2

# Developer Portal APIs
